Australia 3

Australia

Dear potential customer/s from Australia,

as you might imagine yourself, the

<https://www.hackster.io/news/the-katzentracker-is-a-tiny-sam-r34-powered-lora-locator-crammed-into-the-size-of-a-coin-6d24f51f2d46> article generates a lot of interest from all over the world. Sure we are happy about that. But things are a little bit complicated, not only because of corona.

We will answer your questions with a link to this wiki, so we need to write and update the text only in one place.

Unfortunately chipcrisis prevents us from producing the tracker today.

As soon, as all necessary components will be available, we will ramp up production immediately. All is ready and prepared for that „GO“.

We will start with 868 MHz trackers for the European Market first, then we will swap into other frequencies and adapt the first model to serve your market.

We know, there are lots of animals in Australia and the demand is really huge, not only cats, but also sheeps... and others.

We will tell you later about shipping costs here

Regards

Molly Cattracker Team Berlin, Germany
